SEVA FIRST INNOVATION CHALLENGE | BUSINESS AND GOVERNANCE

Prajadhwani

India's public rail for civic voice

A business and governance concept report for the whole administrative ecosystem: citizens, field workers, officials, departments, MLAs, MPs and the state and central governments

Report details	
Prepared by	[Team name], [Team lead name], [Email], [Phone]
Date	November 2026
Status	Concept report. The product is built and tested; the pilot has not yet run. Every number carries an evidence tag [S = public source, P = product evidence, A = team assumption with a validation plan]. The Evidence Register (Appendix C) lists the source or test for each tag.
Live product	https://code-for-community-e2cf2.web.app [P1]

The answer in three lines

The problem. Civic problems cross many offices, but each office works from its own papers, letters and phone calls. The citizen is lost, the officer is blind, and the elected representative is not informed.

The answer. Prajadhwani is one shared digital record for every civic problem, used by citizens, field workers, officers, departments, MLAs, MPs and administrators. It is free for citizens and paid for by government on population-based slabs.

The ask. A pilot partner in government and about ₹3.0 crore of patient capital to reach operating break-even in year 3 and cover about 18.7 crore residents by year 5.

Executive summary

Civic voice is the missing rail in India's digital public infrastructure, and the whole administration, not only the citizen, needs it.

Situation

India has built shared digital rails for money, identity, documents and language: UPI processed 24.07 billion transactions in September 2026 [S12], DigiLocker has 72.43 crore registered users [S13] and 142.76 crore Aadhaar numbers have been generated [S14]. With about 109 crore internet subscribers [S15], the citizen is online. The administration behind the service is not yet on one record.

Complication

A single civic problem touches a field worker, a ward officer or Tahsildar, a District Commissioner, one or more line departments, an MLA, an MP and sometimes a state or central ministry. Grievances already travel across these levels: in 2022 the national grievance system recorded 18.19 lakh grievances, with central ministries and states and Union Territories disposing of them [S7]. But each hand-off is still a letter, a file or a call, so ownership is unclear and the citizen is rarely asked whether the problem is really fixed. Even in the Central Secretariat, only 94 percent of files are e-files [S9]; offices below it are still being brought onto e-Office [S9].

Resolution

Prajadhwani gives every actor one shared digital record. The citizen reports by voice, text or photo in 10 languages [P2]. The area's officials assign a named field worker; the worker fixes; the citizen confirms, with a fair 48-hour rule [P3]. Officials see only their own area; administrators see similar issues grouped across the state [P3]. A planned Department Hub lets state and central departments transfer and resolve problems together on the same record. Citizens are never charged.

Exhibit 1 **Prajadhwani at a glance (base case)**

Dimension	Headline and evidence
Who uses it	Citizens, field workers, ward officers and Tahsildars, District Commissioners, MLAs, MPs, line departments, state and central bodies, and administrators. Built today for all but the Department Hub [P6].
Business model	Free for every citizen, always. Governments pay by the population slab of the jurisdiction (₹1 lakh to ₹4 crore a year), plus Department Hub licences, one-time implementation fees, civic-insight subscriptions, assisted-filing fees and CSR grants [A2, A3].
Market	A bottom-up pool of about ₹370 crore a year in software revenue: state and Union Territory licences, urban local bodies and department hubs [S5, S6, S21, A2, A3].
Financials	Revenue of ₹1.3 crore in year 2 and ₹25.7 crore in year 5. Operating surplus turns positive in year 3 and reaches ₹7.1 crore (27 percent) in year 5 [A1 to A10].
Funding need	Peak cash need of about ₹2.3 crore (base) to ₹2.5 crore (conservative), driven by a 120-day government payment cycle [A8]. We plan for ₹3.0 crore.
Impact	Measured time-saving value of about ₹49.0 crore a year in year 5: about ₹2.3 for every ₹1 governments pay, before counting faster repairs [A4, A5].

Dimension	Headline and evidence
Digital India fit	Built on Bhashini [S11], designed for the DPDP Act [S16], sold through GeM with startup relaxations [S18], and shaped as an open rail aligned with Digital India's three vision areas [S10].
Evidence of the product	Live on web and Android [P1]; 10 of 10 languages verified [P2]; 32 workflow checks and a 20 of 20 live run passed [P3]; 16 photo-privacy checks and an 18 of 18 live run passed [P4]; 64 automated app tests [P5]. No real-citizen pilot yet.

So what

The product risk is largely retired. The remaining risks are institutional: winning a first government partner, and managing government payment cycles. This report is built around those two risks.

Contents

1. The case for change: the whole ecosystem, not only the citizen
2. The solution and what makes it different
3. Market: every actor who uses it and every buyer who pays
4. Business model and pricing by population slab
5. Go-to-market
6. Financial outlook and funding need
7. Impact
8. How administration and governance change: from paperwork to digital
9. Digital India alignment and the public-rail strategy
10. Expansion roadmap
11. Operating model, platform governance and team
12. Risks and how we manage them
13. The next 24 months and the 100-day plan
14. The ask and the use of funds

Appendix A: Assumptions | B: Scenario detail | C: Evidence register | D: Glossary

How to read the evidence tags

[S#] Public source: a published government, regulator or press source, with its link in Appendix C.

[P#] Product evidence: something we built or tested, with the command, test or file that shows it.

[A#] Team assumption: a planning input we cannot yet prove. Each carries the way we will validate it in the pilot.

1. The case for change

A civic problem is never solved by one office. It crosses a field worker, an officer, a department, an MLA, an MP and the state. The failure is in the hand-offs.

The ecosystem around one problem

Consider a leaking water main, a pothole or a dead streetlight. The citizen sees one problem. The administration sees several: a ward officer, a Tahsildar or a municipal engineer; the District Commissioner who coordinates departments; the water, roads or power department that owns the asset; the MLA and MP who are asked about it; and, for schemes and policy, the state secretariat and central ministries.

Exhibit 2 **The ecosystem that touches a single civic problem**

Source: team analysis of how a civic problem is handled, drawn from the roles built into the product [P6].

Everyone in the ecosystem faces the problem

Exhibit 3 **Who is affected, and what breaks for each**

Citizen

Needs: to be heard in their own language, know who owns it, confirm the fix.

Breaks: does not know which office; forms favour English; no word on the outcome.

Field worker

Needs: a clear task with place, photo and note.

Breaks: instructions by phone or paper; no record of what was done.

Ward officer, Tahsildar

Needs: one queue for the area.

Breaks: many channels, duplicates, no view of hotspots.

District Commissioner

Needs: to coordinate several departments on one problem.

Breaks: cross-department problems move by letter and meeting.

Line departments

Needs: only their own problems, with place and evidence.

Breaks: mis-routed complaints; no shared status with others.

MLA and MP

Needs: a live, fair picture of the constituency.

Breaks: learn of problems late, from petitions and the press.

State and central bodies

Needs: comparable data; a way to resolve what lower levels cannot.

Breaks: data on paper or in separate systems, slow to compare.

Administrators, auditors

Needs: a trail of who did what and when.

Breaks: paper files and registers; the trail is manual.

Source: team analysis; role scopes are built into the product [P6]. To be validated through interviews with each role in the pilot [A14].

The evidence that hand-offs, not effort, are the problem

Exhibit 4 **Public evidence on grievance handling and paperwork**

18.19 lakh

grievances recorded by the national grievance system in 2022

[S7]

32 → 27

days: average disposal time of central ministries, 2021 to 2022

[S7]

13 days

average disposal time of central ministries in August 2026

[S8]

94%

of Central Secretariat files handled as e-files; local offices still moving to e-Office

[S9]

Sources: CPGRAMS annual report 2022 [S7]; DARPG monthly reports [S8]; DoPT and PIB on e-Office [S9]. These show that digital systems are already shortening disposal times at the centre, and that the paper-to-digital job is incomplete below it.

- **Grievances already cross levels.** Central ministries and states and Union Territories each disposed of part of the 2022 load [S7]. Karnataka's own system escalates a grievance to a higher officer if the citizen is not satisfied [S17]. The flow exists; a shared civic record across departments does not.
- **Paper persists.** The Central Secretariat reached 94 percent e-files [S9]. In 2024 the government identified 133 attached, subordinate and autonomous offices for e-Office, and 55 had started by July 2024 [S9]. Local offices, where civic problems are actually fixed, are further behind.

Why this is a governance problem

- **Trust.** A complaint that disappears teaches citizens that the system does not listen.
- **Accountability.** Without a named owner and a public record, no one can be held to a standard, and good officials get no credit.
- **Coordination.** Departments cannot fix what they cannot see together.

- **Planning.** Governments plan blind when problems are not captured in a structured, geotagged and comparable form.
- **Inclusion.** The people with most to gain from public services are least able to use English-first, form-heavy channels.

Why now

Exhibit 5 Five forces that did not exist together five years ago

Enabler	Why it matters for Prajadhwani
Bhashini	Government-built speech, translation and language tools: about 20 languages and 350-plus AI models reported [S11]. This removes the biggest barrier, language.
Connected citizens	About 109 crore internet subscribers in March 2026 [S15].
Shared digital rails	UPI, DigiLocker and Aadhaar operate at national scale [S12 to S14], so departments are used to buying shared rails.
Data protection law	The Digital Personal Data Protection Rules were notified in November 2025 and phase in over 18 months [S16]. A privacy-by-design product is timely.
Practical AI	Classification, clustering and routing run cheaply. The model picks from a verified shortlist; contacts are never generated [P6].

So what

The need is universal across the administration, the technology is affordable, and policy favours shared rails. What is missing is one record that every actor in the ecosystem can use.

2. The solution and what makes it different

Prajadhwani is a shared platform with a role for every actor: citizens report, field workers fix, officials coordinate, departments resolve, and the public can see.

What is built today

Exhibit 6 **The product, by user**

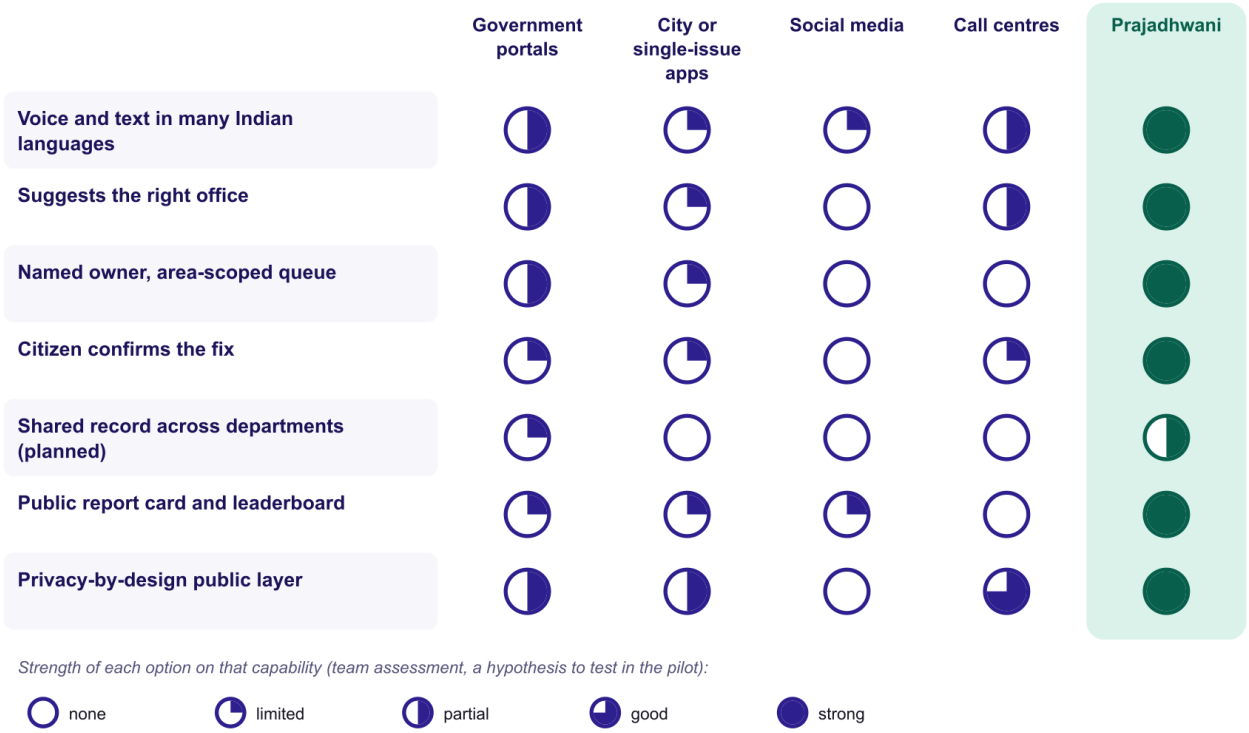

User	What they do today	Status
Citizen	Reports by voice, text or photo in 10 languages; sees the suggested office; gets a token and a public report card; browses a feed; says 'Me too'; chooses whether the photo is private or public (blurred) after accepting privacy terms; confirms the fix.	Built [P6]
Field worker	Task list with place, note and photo; marks in progress or fixed; closes after the 48-hour window.	Built [P3]
Ward officer, Tahsildar, District Commissioner	Six-tab dashboard for their own area; assigns workers singly or in bulk; opens the original photo; AI briefing and PDF report.	Built [P6]
MLA and MP	The same area dashboard for their own constituency; public report cards name them; leaderboard of share fixed.	Built [P6]
Administrator	Approves officials; groups similar issues by district, taluk, constituency, type, status and assignee; bulk assign and close.	Built [P3]
Line departments, state and central bodies	Receive, transfer and jointly resolve problems on one shared record with a service-level clock; connectors to existing grievance systems.	Planned (Department Hub)
The public	Open anonymised map and feed; report cards; leaderboard.	Built [P6]

Source: product as deployed and tested [P1, P3, P6]. The Department Hub is on the roadmap and is not claimed as built.

Competitive landscape

Prajadhwani does not compete with the idea of grievance redress. It improves how each existing option handles the loop. Options are grouped by type; examples include national and state grievance portals, city civic apps, single-issue apps, social media and telephone helplines.

Exhibit 7 **How the alternatives compare (team assessment, a hypothesis to test in the pilot) [A15]**

Source: team assessment of publicly known characteristics, by category and not by named product. Karnataka's Janaspandana system, for example, offers a portal, app and 1902 helpline with escalation [S17].

Five sources of difference

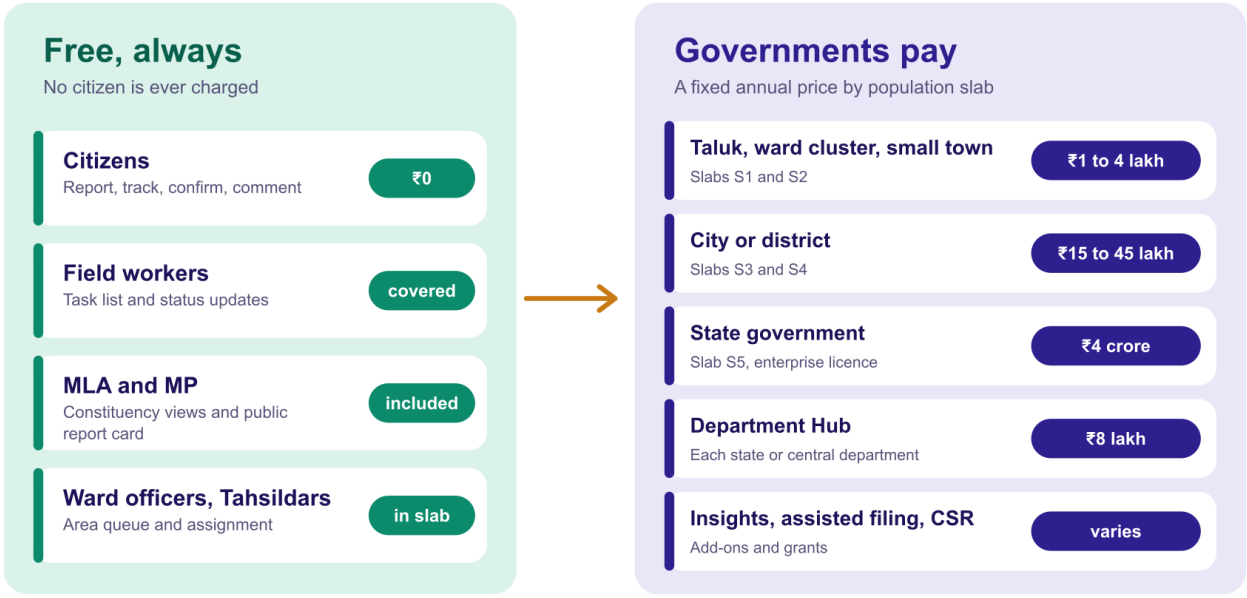

1. **One record for the whole administration.** Citizens, workers, officers, departments, MLAs and MPs work from the same ticket.
2. **Language stays language.** The citizen's words are never forced into English on their own screen [P2].
3. **Citizen-confirmed closure.** The person who reported decides whether it is fixed, with a fair 48-hour rule [P3].
4. **Deterministic routing.** AI ranks a shortlist; official contacts come only from a verified directory of 26 offices [P6].
5. **A privacy firewall.** Officials and the public work from an anonymised copy; photos are private by default [P4].

3. Market: every actor who uses it and every buyer who pays

The users are the whole administration; the buyers are governments at every level. Citizens are never charged.

Who uses it, and who pays

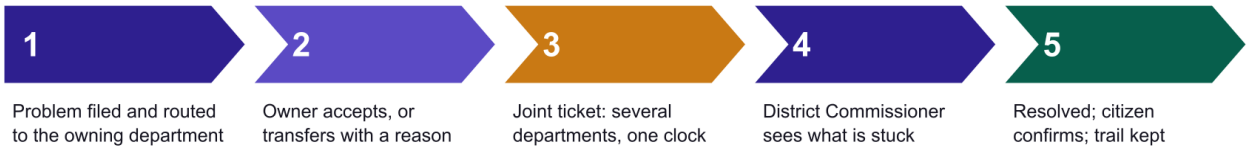

Exhibit 8 Users and buyers

Source: team business design [A2, A3]. Citizens are never charged: this is a design rule of the platform.

How departments communicate and resolve problems together (Department Hub, planned)

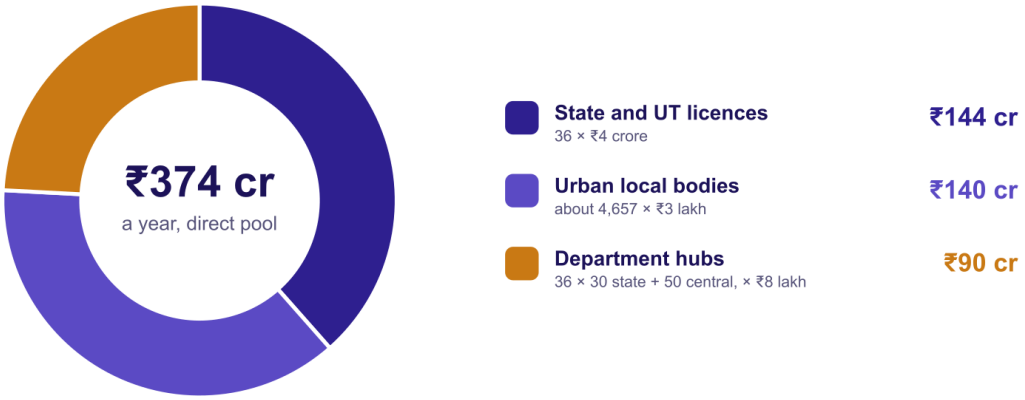

Many civic problems need more than one department: a road dug up for a water pipe, a drain blocked by a power cable trench. Today these move by letter or by a meeting. The Department Hub puts them on one shared ticket:

Source: product roadmap. Area-scoped assignment, suggested-office routing and the audit trail are built [P3, P6]; inter-department transfer and the joint ticket are planned and priced as an add-on [A3].

Sizing the revenue pool bottom-up

Exhibit 9 **Annual software revenue pool in India (₹ crore), built from counted jurisdictions**

Sources: 28 states and 8 Union Territories [S21]; about 4,657 urban local bodies in 2017, a dated figure [S6]; prices from the slab card [A2]; 30 departments per state and 50 central departments are assumptions to verify [A3, A12]. The 2,68,603 gram panchayats [S5] are served inside district and state subscriptions, so they are not counted separately.

Reading the numbers honestly

- The direct software pool, a few hundred crore rupees a year, is real but not enormous. We do not hide this.
- **The larger prizes are different.** The value created for citizens and officials, the adjacent pools (analytics, assisted filing, integration) and the strategic position of the default civic-voice rail.
- **Our own plan is a small share.** Year-5 subscription revenue of ₹18.8 crore is about 5 percent of the pool, so the plan does not depend on winning the market.

> **So what**
> We should be judged as public infrastructure with a sustainable business model, not as a venture-scale consumer app.

4. Business model and pricing by population slab

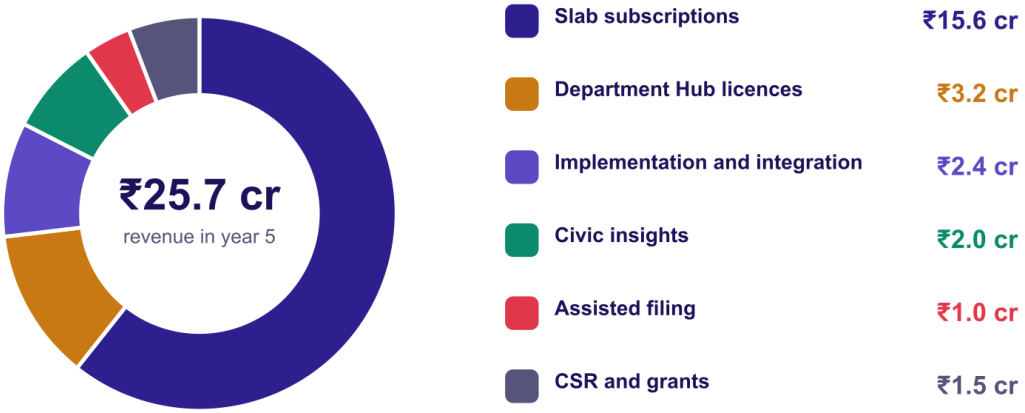

Citizens pay nothing. Governments pay a fixed annual price set by the population slab of the jurisdiction, with a separate Department Hub licence.

Five revenue streams

Exhibit 10 Revenue streams

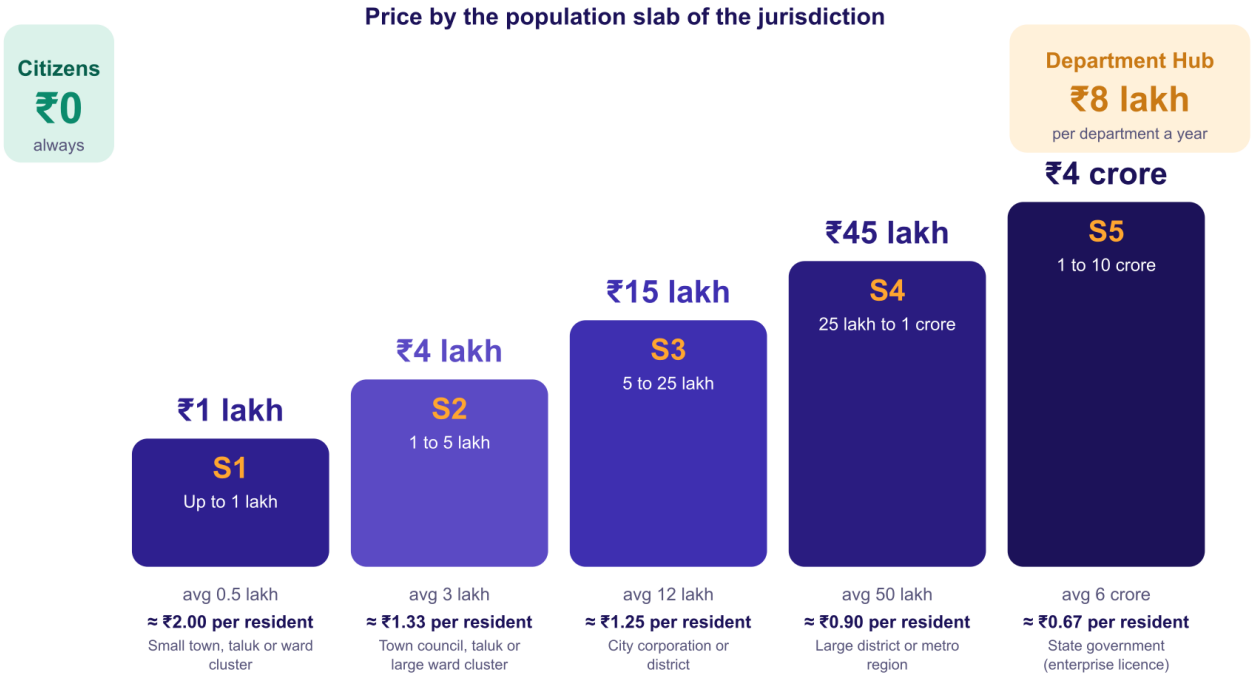

Stream	What it is	Role
1. Jurisdiction subscription	A fixed annual price by population slab (Exhibit below). Covers all officials, workers, MLA and MP views in the jurisdiction.	Core and recurring.
2. Department Hub licence	A licence per department (state or central) for inter-department transfer, joint tickets and service-level tracking. ₹8 lakh a year.	Starts in year 3, once built [A3].
3. Implementation and integration	One-time fee: onboarding, data set-up, training, integration with existing grievance systems. 25 percent of new annual contract value.	Funds delivery [A9].
4. Civic insights	Subscriptions to anonymised, aggregated analytics.	High margin; from year 3 [A10].
5. Assisted filing and CSR	A small per-filing fee at Common Service Centres; CSR and philanthropic grants for outreach.	Keeps the citizen side free [A10].

Exhibit 11 Year-5 revenue by stream (base case)

The price card: by the population of the jurisdiction

Exhibit 12 **Public price card (illustrative; to be published openly)**

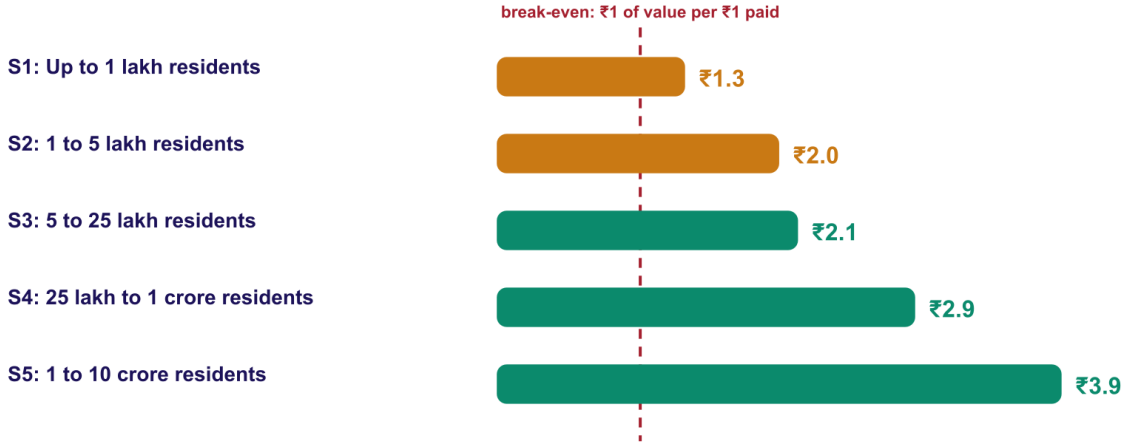

Source: team pricing proposal [A2]. The last column is price divided by the average population of the slab, shown only to compare with per-resident pricing: it falls from about ₹2 to under ₹1 as the population served rises. Karnataka's projected population is 6.82 crore [S2], so a state-slab licence of ₹4 crore is about ₹0.59 per resident.

Why price by slab and not per resident

- **Simple to buy.** A fixed annual price per jurisdiction fits how government budgets and the Government e-Marketplace work, with no usage metering.
- **Fair across sizes.** A small taluk pays a small fixed fee; a state pays more, but less per resident.
- **Predictable for the buyer.** The fee does not rise when citizens report more, so officials are not discouraged from encouraging use.
- **Citizens stay out of the revenue model.** No fees, no advertising, no sale of personal data.

The price is below the value it creates (test by slab)

Exhibit 13 **Measured value versus price, by slab, at maturity (1.5 percent of residents reporting a year)**

Source: model assumptions: 1.5 percent of residents report a year [A4]; ₹175 of measured value per report [A5]. Both are validated in the pilot.

Pricing principles

6. **Citizens are never the product.** No fees, no advertising and no sale of personal data, ever.
7. **Pay for performance.** 15 percent of each government fee is tied to service levels (availability, response times, closure reporting).
8. **Transparent.** The price card is public. Multi-year terms and joint rollouts across offices earn discounts.
9. **Start free, prove, then pay.** A 90-day pilot with a joint review removes procurement risk for the first buyer.
10. **Procurement-ready.** Listing on the Government e-Marketplace; recognised startups can use relaxations on prior experience and turnover under the General Financial Rules [S18].

Unit economics of one S3 contract (a city or district of about 12 lakh residents)

Exhibit 14 **Steady state, ₹ lakh a year**

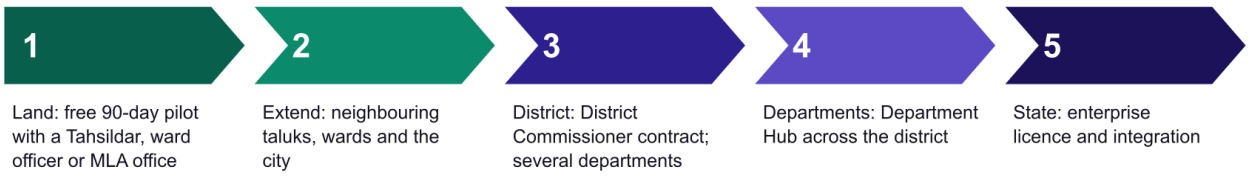

Source: team model [A2, A4, A6, A9].

5. Go-to-market

Land with one office that can say yes, prove value in 90 days, then expand across offices, departments and levels of government.

Land and expand

Exhibit 15 The expansion ladder inside one geography

Source: team go-to-market plan [A1].

Channels

- **Direct to government.** Solution leads working with district and city administrations and with state e-governance bodies.
- **Government e-Marketplace and startup procurement.** A listed product and a public price card; relaxation of prior experience and turnover for recognised startups [S18].
- **Elected representatives as sponsors.** MLA and MP offices champion a rollout; their area view is included in the contract.
- **Common Service Centres and gram panchayats.** 'Voice Mitra' helpers bring citizens without smartphones into the system; the 2.69 lakh gram panchayats [S5] are the last mile.
- **Civil-society and resident associations.** Outreach and trust, supported by CSR.
- **Technology partners.** Bhashini for language [S11]; the national e-governance bodies for standards; government-empanelled cloud where required.

What each buyer needs to hear

Buyer	The message
Ward officer, Tahsildar	One queue for your area, with the photo and place, and a way to show what you fixed.
District Commissioner	See all departments' problems in one view; assign across departments; know what is stuck.
Line department head	Receive only your problems, with evidence; transfer what is not yours with a reason; share status with others.
MLA, MP	A live and fair picture of your constituency, ranked by share fixed, not volume.
State secretariat, central ministry	Comparable data across districts; connectors to existing grievance systems; no replacement of your portal.
Everyone	Free 90-day pilot; officials see only their own area; citizens' identities are never exposed; part of the fee is tied to service levels.

6. Financial outlook and funding need

Base case: operating surplus from year 3, ₹25.7 crore revenue in year 5, and a funding need of about ₹2.3 crore driven by government payment cycles.

Exhibit 16 Contracts in force by population slab (average over the year)

Contracts	Year 1	Year 2	Year 3	Year 4	Year 5
S1: Up to 1 lakh residents	0	4	12	30	60
S2: 1 to 5 lakh residents	0	2	8	20	40
S3: 5 to 25 lakh residents	0	1	4	10	18
S4: 25 lakh to 1 crore residents	0	0	1	3	6
S5: 1 to 10 crore residents	0	0	0.5	1	2
Department hubs	0	0	4	15	40
Residents covered (crore)	**0.1**	**0.2**	**4.3**	**9.5**	**18.7**

Source: team plan [A1, A3]. Year 1 is the free pilot. Half a state contract in year 3 reflects a mid-year start. Karnataka has 31 districts [S3] and 224 assembly constituencies [S4], so the district and city counts are a small share of the state.

Exhibit 17 Subscription revenue by population slab (₹ crore)

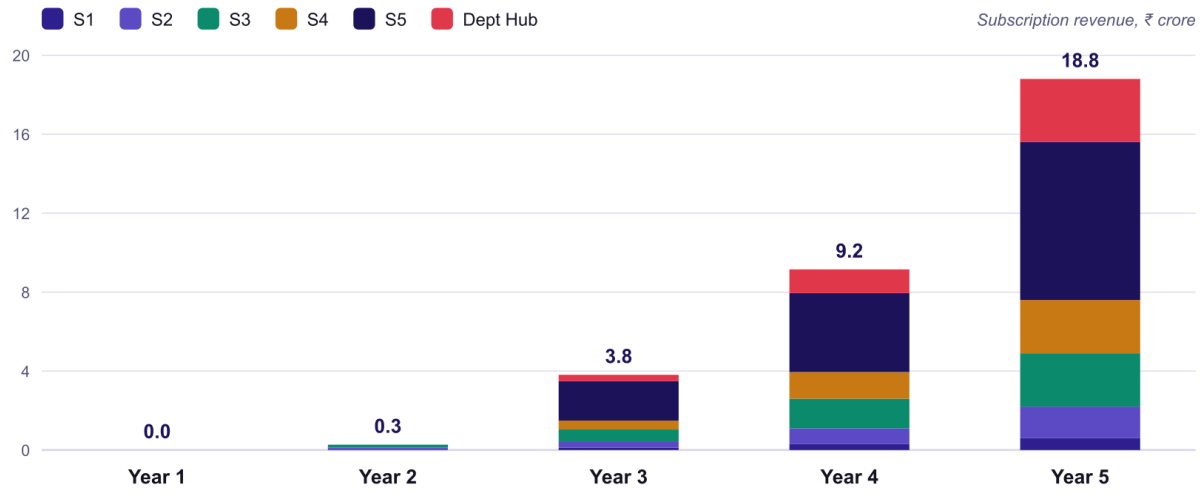

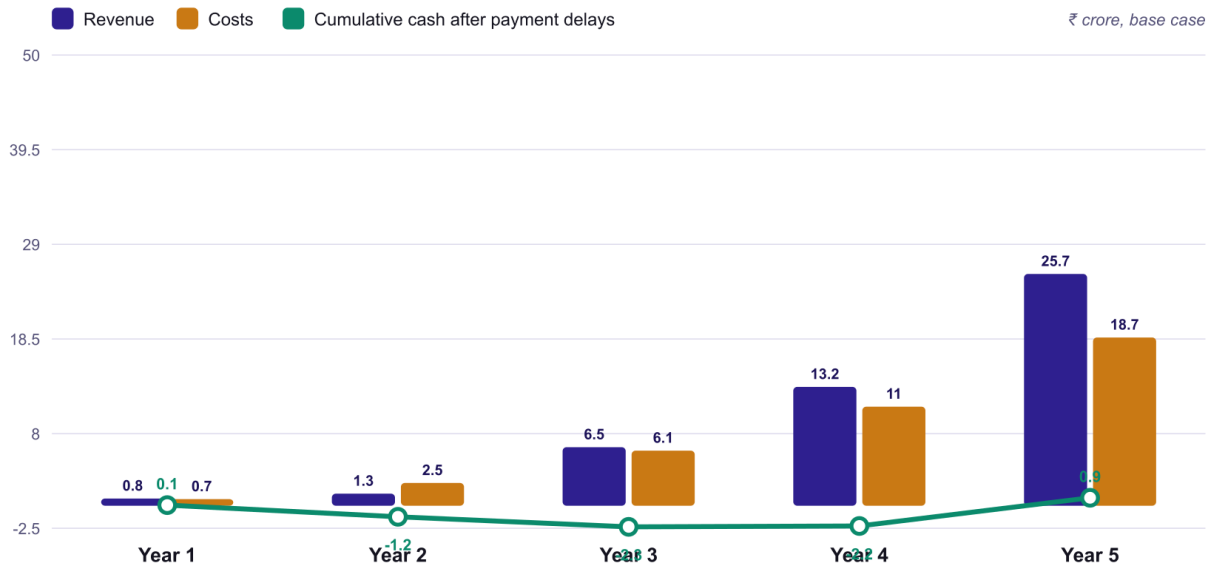

Exhibit 18 Five-year plan, base case (₹ crore)

	Year 1	Year 2	Year 3	Year 4	Year 5
Revenue	**0.8**	**1.3**	**6.5**	**13.2**	**25.7**
Slab subscriptions (S1 to S5)	0.0	0.3	3.5	8.0	15.6
Department Hub licences	0.0	0.0	0.3	1.2	3.2
Implementation and integration	0.0	0.1	0.9	1.3	2.4
Civic insights	0.0	0.0	0.2	0.8	2.0
Assisted filing	0.0	0.0	0.1	0.4	1.0
CSR and grants	0.8	1.0	1.5	1.5	1.5
Costs	**0.7**	**2.5**	**6.1**	**11.0**	**18.7**

	Year 1	Year 2	Year 3	Year 4	Year 5
Team	0.5	1.8	3.8	6.5	10.5
Cloud, photo checks, messaging	0.0	0.0	0.2	0.5	1.1
Customer success and delivery	0.0	0.1	0.9	2.1	4.2
Sales, field and outreach	0.2	0.4	0.8	1.3	1.9
Legal, audit, other	0.1	0.3	0.4	0.6	0.9
Operating surplus	**0.1**	**(1.2)**	**0.4**	**2.2**	**7.1**
Cumulative cash after payment delays	0.1	(1.2)	(2.3)	(2.2)	0.9

Source: team model, assumptions in Appendix A [A1 to A10]. Brackets denote negatives. Year 1 is the free pilot year; revenue is grants. Receivables assume a 120-day government payment cycle [A8].

Exhibit 19 **Revenue, costs and cumulative cash by year (₹ crore)**

Three scenarios

Exhibit 20 **Scenario comparison: revenue by year (₹ crore)**

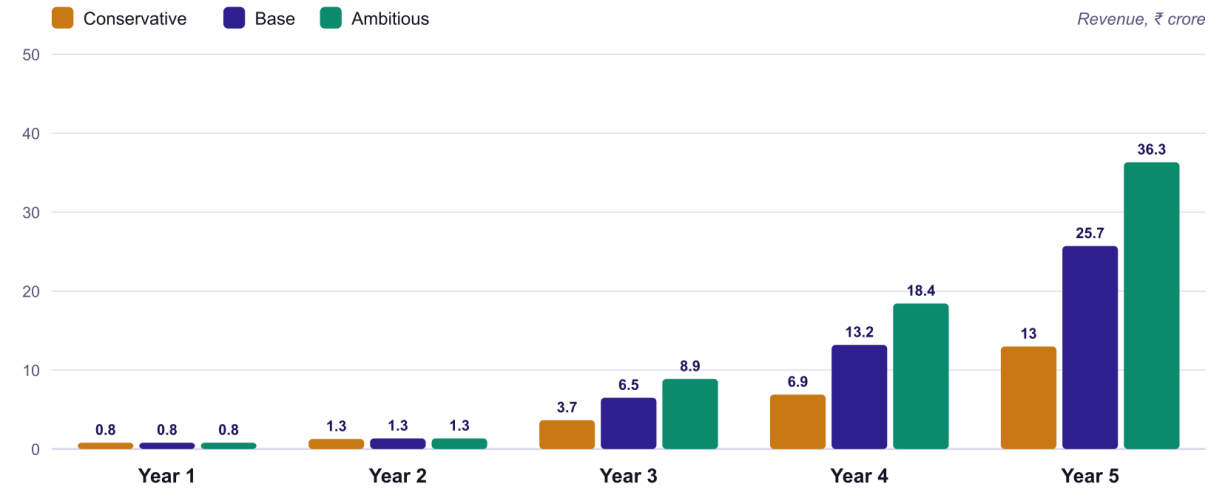

Exhibit 21 **Scenario comparison: year 5 and cash need**

	Conservative	Base	Ambitious
Contracts relative to plan, from year 3	50 percent	100 percent	150 percent
Prices relative to plan	80 percent	100 percent	100 percent
Residents covered, year 5 (crore)	9.3	18.7	28.0
Revenue, year 5 (₹ crore)	13.0	25.7	36.3
Operating surplus, year 5 (₹ crore)	2.1	7.1	15.0
Peak cumulative cash need (₹ crore)	2.5	2.3	1.3
Cost base	Hiring slowed by about a third from year 3	Plan	Plan

Source: team model [A1 to A10]. In the conservative case the cost base is flexed down; without that the business would not break even.

What drives the shape of the curve

- **People are the cost.** Cloud and photo checks are about ₹4 per report [A6]; the plan is dominated by team and delivery cost, which we control.
- **Government pays slowly.** A 120-day cycle [A8] turns a profit into a cash deficit while the company grows, so funding need exceeds the accounting loss.
- **Margins improve with scale.** A state licence serves many residents at one fixed fee and a small marginal cost.

Funding need

Peak cumulative cash need is about ₹2.3 crore (base) to ₹2.5 crore (conservative). We plan for ₹3.0 crore of patient capital: a mix of challenge grant, impact and angel investment, CSR and a government pilot budget. This covers the trough in both cases with a buffer.

7. Impact

Measured value of about ₹49.0 crore a year by year 5 from time saved alone: about ₹2.3 of value for every ₹1 governments pay.

A simple, conservative value model

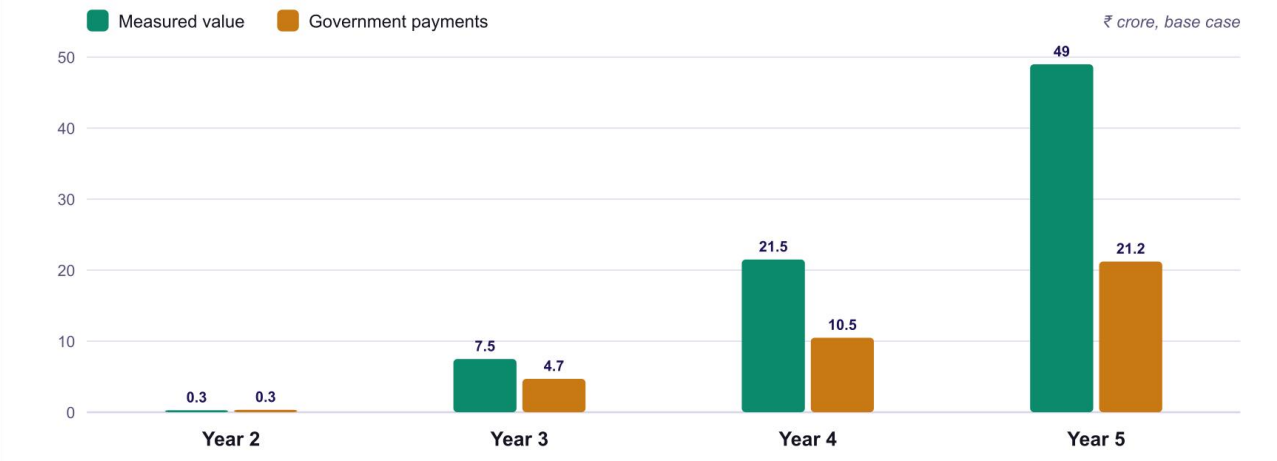

We count only what we can defend: the time citizens save and the time officials and departments save. We do not count the value of faster repairs, avoided accidents, reduced water loss or better planning. We will measure those in the pilot.

Exhibit 22 Value per report (assumptions to validate)

Item	₹ per report	Basis and validation
Citizen time saved (no travel, no repeat visits, no chasing)	100	About 1.5 hours of citizen time. Validate with a time-and-motion study and official wage data in the pilot [A5].
Official and department time saved (routing, duplicate triage, status calls, transfers)	75	About 15 minutes of official time per report. Validate in the pilot [A5].
Measured value per report	**175**	**Excludes faster repairs and downstream benefits.**

Source: team assumptions [A5].

Exhibit 23 Measured value versus what governments pay (base case, ₹ crore)

Source: team model [A1 to A5]. In years 2 and 3 adoption is still building, so payments are close to or above measured value; from year 4 value exceeds payments.

Governance outcomes

Outcome	How Prajadhwani delivers it
Transparency	Public report cards, map and feed make the state of civic services visible [P6].
Accountability	Every ticket has an area owner and an assigned worker; the history records who changed what and when; the leaderboard shows the share fixed [P3, P6].
Coordination	One record across officer, department, MLA and MP; Department Hub (planned) for joint resolution.
Responsiveness	Emergencies and hotspots are surfaced; bulk assignment [P6].
Participation	'Me too' and comments; citizens confirm fixes [P3, P6].

Outcome	How Prajadhwani delivers it
Evidence-based planning	Structured, geotagged, clustered data across districts, taluks and constituencies; AI briefings and PDF reports [P6].
Inclusion	Voice in 10 languages [P2]; assisted filing for citizens without smartphones (planned).
Privacy and trust	Anonymised public layer; consent-based photos with versioned terms; area-scoped access [P4].

How we will know: the scorecard

Exhibit 24 **Impact scorecard for the pilot and beyond**

Metric	Why it matters	Pilot target (to set with partner) [A11]
Median time to acknowledgement by an official	Responsiveness	Within 2 days
Share of reports assigned to a named worker within 3 days	Ownership	At least 60 percent
Share of fixed reports confirmed by the citizen; reopen rate	True closure	Tracked and published
Share of reports filed in a language other than English	Inclusion	At least half in the pilot area
Share of cross-department problems resolved on a joint ticket	Coordination	Baseline in the first 60 days
Citizen satisfaction (in-app)	Trust	Baseline set in the first 30 days

Context for targets: the central grievance system's average disposal time fell to 13 days in August 2026 [S8]; our pilot targets acknowledgement in 2 days and measure confirmed closure, which the national system does not report.

8. How administration and governance change: from paperwork to digital

Adoption moves the whole chain from letters, registers and meetings to one shared digital record, and moves governance from periodic and opaque to live and public.

94%
e-files in the Central Secretariat, the model local offices now follow
[S9]

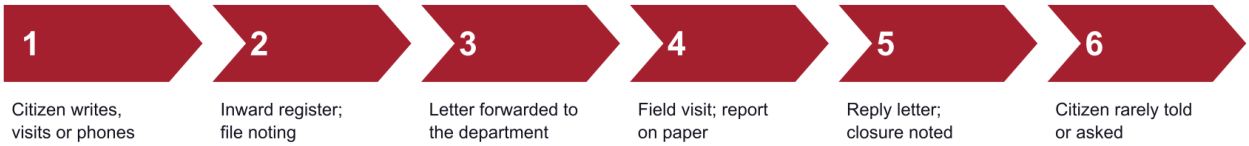

55 of 133
attached and subordinate offices that had begun e-Office by July 2024
[S9]

27 → 13
days: central ministries' average grievance disposal time, 2022 to Aug 2026
[S7, S8]

Context: digital systems are already shortening disposal and replacing paper files at the centre. Prajadhwani brings the same shift to the local, civic layer where problems are actually fixed.

Exhibit 25 **The life of one civic complaint: before and after**

Before: paper and phone (typical process, to be mapped with the pilot partner) [A14]

After: one shared digital record [P3, P6]

Exhibit 26 What changes at each level of administration

Level	Before: paperwork	After: one digital record
Citizen	Visits or phones; no token; no word on the outcome.	Voice or photo in own language; token ID; status; confirms the fix.
Field worker	Verbal or paper instructions; no proof of work.	Task list with place, photo and note; status from the phone.
Ward officer, Tahsildar	Registers, letters, reports compiled by hand.	Area queue, hotspots, emergencies; bulk assignment; live counts.
District Commissioner	Review meetings; letters between departments.	District view across departments; Department Hub for joint problems (planned).
MLA, MP	Learn of problems from petitions and the press.	Live area dashboard; public report card; leaderboard by share fixed.
Line department	Mis-routed letters; no view of others' status.	Receives owned problems with evidence; transfers with a reason (planned).
State and central bodies	Data on paper or in separate systems.	Comparable data; AI briefing; PDF report; connectors to existing systems.
Auditors, oversight	Manual file trail.	Automatic history of who changed what, and when.

Exhibit 27 Reporting: from paperwork to digital

Paper artefact today	Prajadhwani equivalent	
Inward and outward registers	Ticket with token ID, created automatically	Built
File noting and forwarding letters	Assignment note and transfer on the ticket	Built
Field inspection report	Worker status update with photo	Built
Monthly review report compiled by hand	Live dashboard counts and AI briefing	Built
Area review document	One-click PDF area report	Built
Audit trail, RTI-style traceability	Status history: who changed what, when	Built
Inter-department letter	Joint ticket with transfer and one clock	Planned
Public noticeboard of works	Public report cards and leaderboard	Built

Exhibit 28 **Five shifts in how governance works**

So what

The biggest saving is not speed alone. It is that every actor works from one record, so ownership, evidence and outcome are visible to everyone who needs them.

9. Digital India alignment and the public-rail strategy

Prajadhwani turns Digital India's three vision areas into a working civic service: infrastructure as a utility, governance on demand, and empowerment of citizens.

Exhibit 29 Shared rails at national scale, and the one that is missing

Next
A shared rail for civic voice across departments: Prajadhwani

Sources: NPCI data via press [S12]; Parliament reply on DigiLocker [S13]; UIDAI [S14].

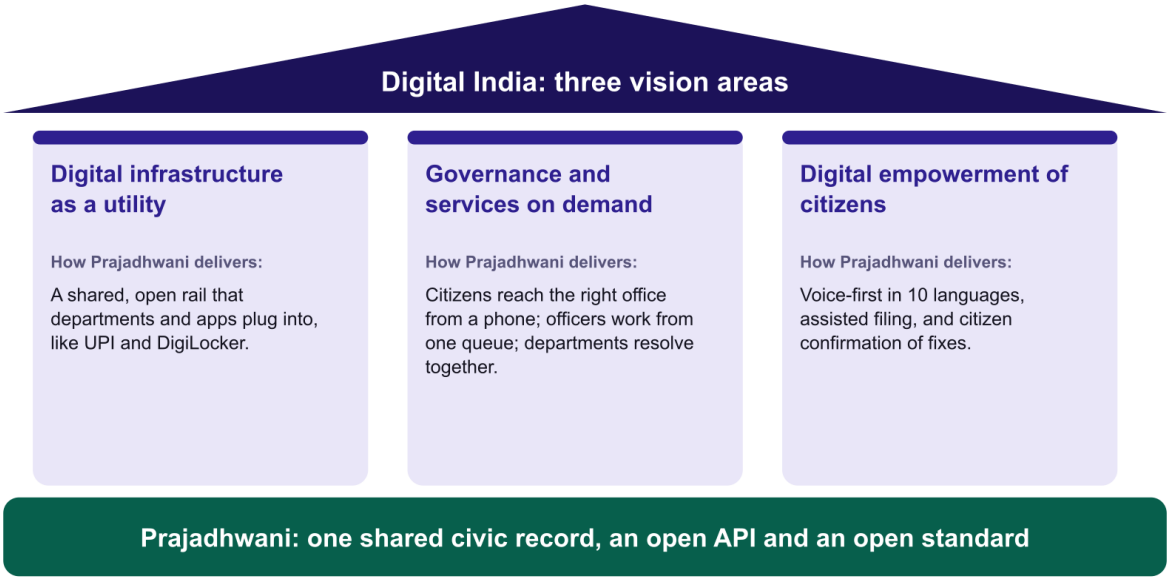

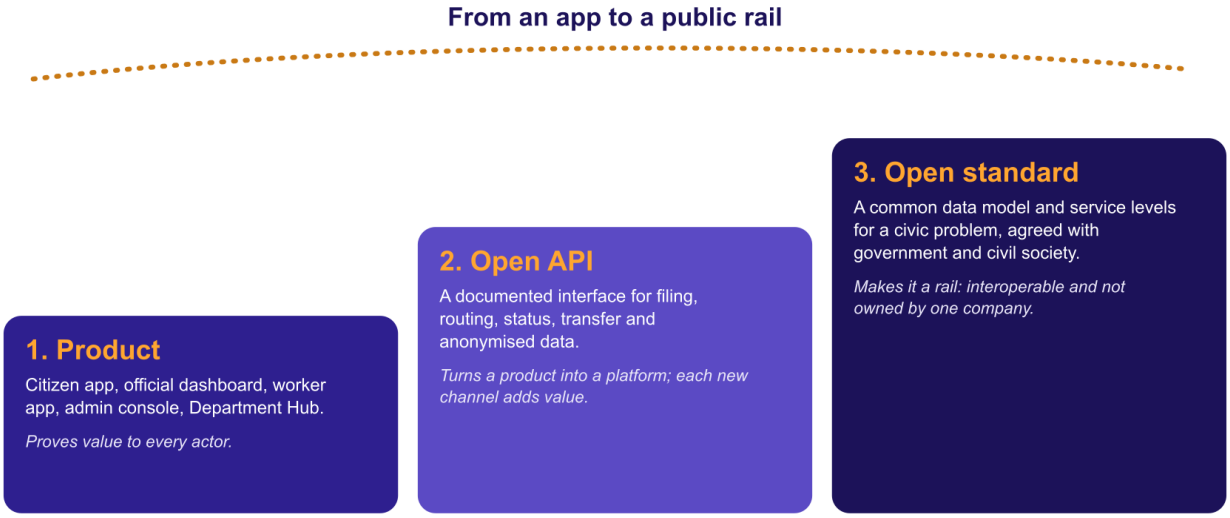

Exhibit 30 Alignment with Digital India and national priorities

National priority	How Prajadhwani contributes
Digital infrastructure as a core utility (Digital India vision area 1)	A shared, open rail that departments and apps plug into, in the spirit of UPI and DigiLocker [S10, S12, S13].
Governance and services on demand (vision area 2)	Citizens reach the right office from a phone; officers work from one queue; departments resolve together; status is visible [S10, P6].
Digital empowerment of citizens (vision area 3)	Voice-first in 10 languages, assisted filing, and citizen confirmation of fixes [S10, P2].
Bhashini	Uses Bhashini for speech recognition, translation and language detection, a live public-service use of the platform [S11, P2].
Digital Personal Data Protection Act and Rules	Recorded consent for public photos with a versioned terms record; purpose limitation; anonymised public layer; role-scoped access [S16, P4].
Government e-Marketplace and startup procurement	Public price card; relaxation of prior experience and turnover for recognised startups [S18].
e-Office and paperless government	Extends the paper-to-digital shift from the secretariat to the local, civic layer [S9].

National priority	How Prajadhwani contributes
Common Service Centres and gram panchayats	'Voice Mitra' assisted filing; the last mile of about 2.69 lakh gram panchayats [S5].

From product to public rail: three layers

Exhibit 31 **The path from an app to a rail**

Governing the rail

Public rails earn trust through governance as much as technology. We propose to separate the operating company from the open standard: the company runs the service and sells subscriptions, while a non-profit foundation with government, civil-society and academic members holds the open standard, the data-protection charter and the leaderboard method.

The vision

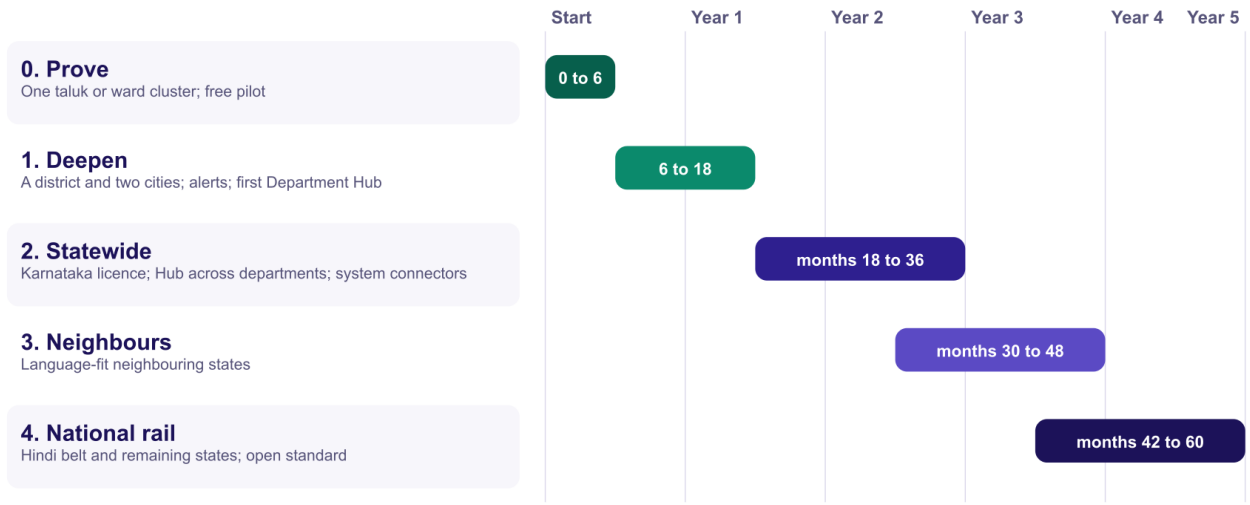

A citizen in any village or ward speaks one sentence in their own language. It reaches the right officer, department and worker, is fixed, and returns to the citizen to confirm.

Every grievance channel in the country, whether a state helpline, a city app or a national portal, speaks to the same rail, so no one has to start again.

10. Expansion roadmap

Expand in layers: depth in Karnataka first, then neighbouring language-fit states, then the rest, adding departments and channels as we go.

Exhibit 32 Phased roadmap

Choosing the next states

Exhibit 33 State prioritisation (team judgement, to be validated) [A13]

State	Languages already supported in the app [P2]	Why in this wave
Karnataka	Kannada, English	Home state: area data, 224 assembly and 28 Lok Sabha constituencies [S4], 31 districts [S3] already loaded [P6]. Population about 6.82 crore [S2].
Maharashtra	Marathi, Hindi, English	Language supported; neighbouring state.
Tamil Nadu	Tamil, English	Language supported; neighbouring state.
Telangana, Andhra Pradesh	Telugu, Hindi, English	Language supported; neighbouring states.
Kerala	Malayalam, English	Language supported; neighbouring state.
Gujarat, West Bengal, Punjab	Gujarati, Bengali, Punjabi, Hindi, English	Languages supported; second wave of expansion.
Hindi-belt states	Hindi, English	Hindi supported; state by state, after the open API is in place.

Source: languages from the product [P2]; sequencing is team judgement [A13]. State populations other than Karnataka are deliberately not quoted here, because we have not yet verified them against official sources.

What changes when we enter a new state

- Reference data: areas, boundaries, representatives and the directory of offices (the main work).
- Language quality review by native speakers.
- Integration with the state's existing grievance system.
- Department Hub set-up: the state's department list and owners.

- Local partners for outreach and assisted filing.
- No new product build: area, language and routing are configuration.

Capability expansion

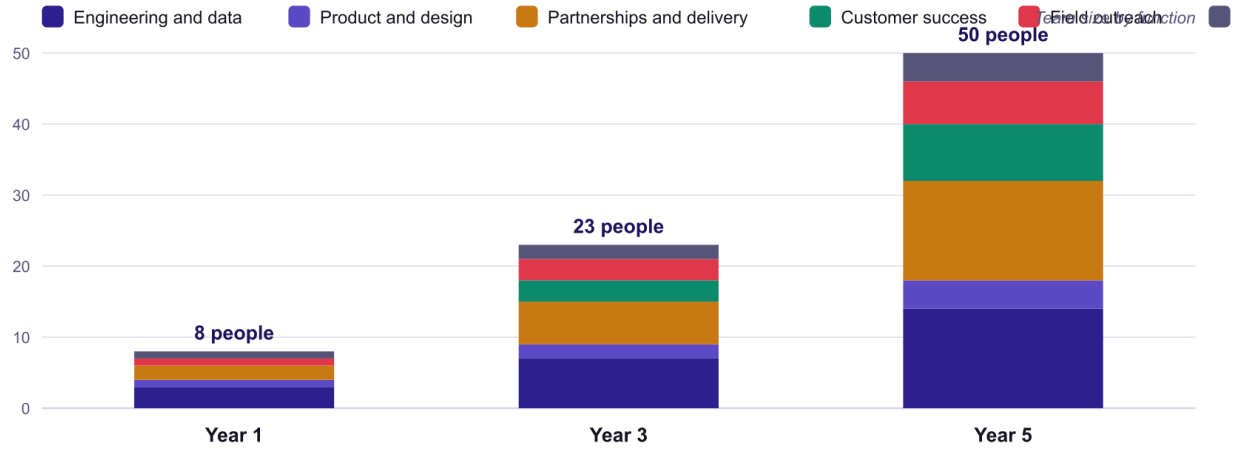

- **More channels:** WhatsApp, IVR and kiosks for citizens who do not use the app.
- **More languages:** More Indian languages as Bhashini coverage grows [S11].
- **Deeper service:** Deadlines and escalation, official replies visible to citizens, department scorecards, links into existing grievance systems.
- **More uses of the rail:** Emergency alerts, scheme-delivery feedback and public-works progress tracking.

11. Operating model, platform governance and team

A lean team, a clear governance charter and independent oversight make the platform safe to hold public trust.

Team and hiring plan

Exhibit 34 Team by phase [A7]

Source: team plan, consistent with the team cost line in the financial plan [A7].

Platform governance

Principle	How it is enforced
Purpose limitation and data minimisation	Only data needed to route and fix a report is collected; the public layer carries an allow-listed set of fields, audited regularly [P4].
Consent and control	Photos are private by default; public only after the citizen accepts versioned privacy terms; withdrawal deletes the public copy [P4].
Least-privilege access	Officials see only their own area; field workers see only tickets assigned to them; every status change records who and when [P3].
Transparency of method	The leaderboard ranks share fixed, not volume; vacant seats are not ranked; trial data is never counted [P6].
No invented facts	Official contacts come only from a verified directory; AI never generates them [P6].
Abuse and safety	Comment moderation, rate limits, safe-search check on every public photo [P4].
Independent oversight	An advisory board with government, civil-society, academic and citizen members reviews privacy, fairness and performance quarterly.
Security	Independent security audit before real data is held; role-based rules validated [P3]; data stored in India on government-empanelled cloud where required.

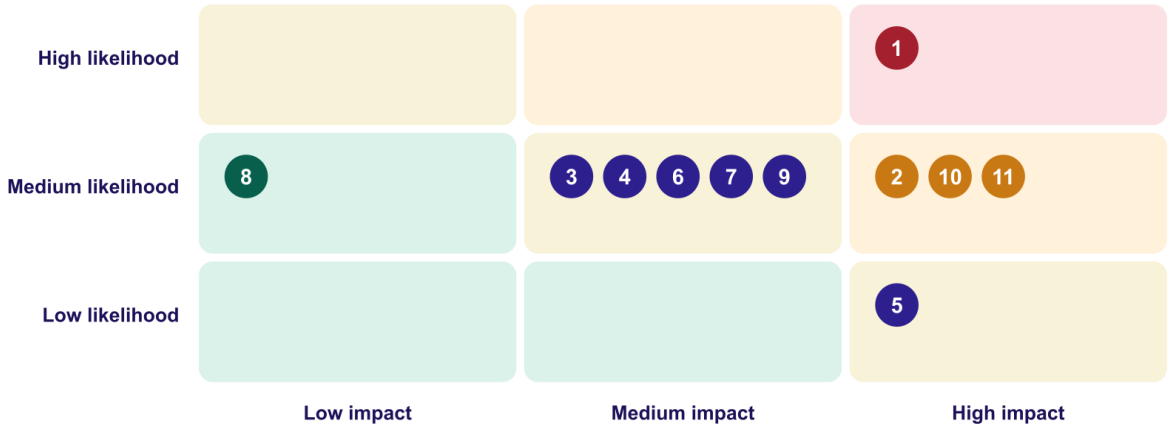

Service levels we publish

- Platform availability and response times, reported monthly.
- Share of reports acknowledged by an official within 2 days, per area.
- Share of fixed reports confirmed by citizens, and the reopen rate, per area.
- Time to remove abusive content and to withdraw a public photo.

12. Risks and how we manage them

The largest risks are institutional rather than technical: procurement, adoption and political sensitivity.

Exhibit 35 Risk register [A16]

Risk	Likelihood	Impact	Mitigation
1. Slow government procurement and late payment	High	High	Free 90-day pilot; GeM listing and startup relaxations [S18]; public price card; 120-day receivables in the plan [A8]; CSR as a buffer.
2. Officials and departments do not adopt	Medium	High	Area-scoped, simple queue; training; elected-representative sponsorship; adoption metrics in the joint review.
3. Departments resist a shared record	Medium	Medium	Start with one willing department; show time saved; transfer with a reason, not blame; District Commissioner sponsorship.
4. Political sensitivity of the leaderboard	Medium	Medium	Rank on share fixed, not volume; publish the method; never rank vacant seats; start opt-in if needed [P6].
5. Privacy incident or misuse of photos	Low	High	Private by default; consent and versioned terms; blur and EXIF removal; safe-search; least privilege [P4]; security audit; breach plan.
6. Language quality errors	Medium	Medium	Native-speaker review; citizen can edit text; fall-back providers [P2].
7. Dependence on third-party services (Bhashini, cloud)	Medium	Medium	Fall-back providers already built [P2]; data portability; production quota; multi-region plan.
8. Spam and abuse	Medium	Low	Moderation, rate limits, reporting.
9. A government-built alternative	Medium	Medium	Position as an open rail that integrates with national and state systems [S7, S17]; offer to be adopted as the standard.
10. Trust gap among citizens	Medium	High	Publish the scorecard; citizen confirmation; visible fixes; start where a partner is committed.
11. Funding and key-person risk	Medium	High	Document everything; phased hiring; ₹3.0 crore plan with a buffer; cost flex as in the conservative case.

Source: team assessment [A16].

13. The next 24 months and the 100-day plan

We are ready to start the pilot within days of a partner signing.

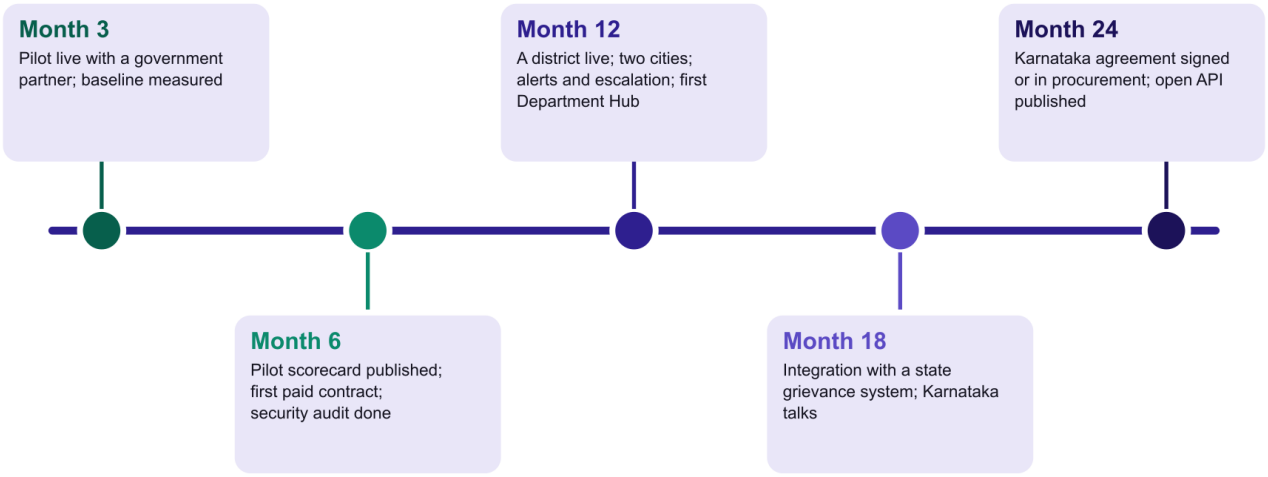

The 100-day plan

Exhibit 36 From signature to joint review

Milestones

Exhibit 37 24-month milestones

14. The ask and the use of funds

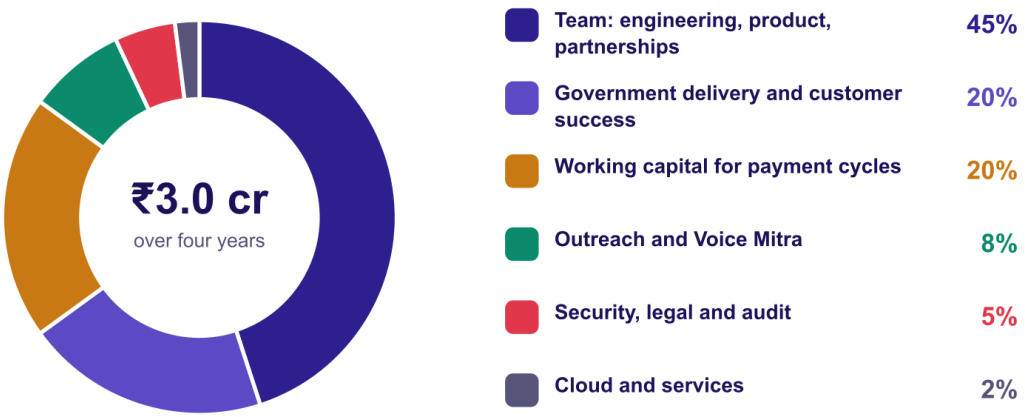

We ask for a pilot partner, patient capital of about ₹3.0 crore and a handful of enabling supports.

Exhibit 38 What we need

Support	Why	Size
Pilot partner in government	A named ward, taluk, district or city office, one MLA or MP office and, ideally, two departments to test the Department Hub.	Letter of support or MoU
Patient capital	To fund team, delivery and the cash gap from government payment cycles until break-even.	About ₹3.0 crore in total; challenge grant of ₹[__] lakh towards this
Bhashini production access	A production quota and technical contact at pilot and state scale [S11].	Access
Legal and privacy review	Review of privacy terms and data-sharing under the Digital Personal Data Protection Act and Rules [S16].	Pro bono or ₹3 to 4 lakh
Independent security audit	Before real citizen data is held.	₹2 to 3 lakh
Mentoring and introductions	Government partnerships, public procurement, civic-tech product and policy.	Mentors
Cloud credits and visibility	Lower pilot costs; introductions to officials and civil society.	Credits and launch event

Use of funds: ₹3.0 crore

Exhibit 39 Planned use of the ₹3.0 crore over the first four years

Source: team plan [A7, A8].

Why Prajadhwani should win in Business and Governance

A real business. Clear buyers at every level, a public price card by population slab, positive unit economics and a plan that survives a conservative case.

A real governance gain. One record for the whole administration; transparency, accountability, coordination, inclusion and citizen-confirmed closure, with privacy built in.

Already built and tested. Funding goes into a pilot and a business, not a prototype [P1 to P5].

A Digital India fit. Built on Bhashini, aligned with the DPDP Act, sold through GeM, and designed to become an open public rail [S10, S11, S16, S18].

Free for citizens, always. The citizen is never the customer and never the product.

Honest about risk. We show the conservative case, the payment-cycle cash gap and what we have not yet proven.

Appendix A: Assumptions

All financial and impact figures come from one transparent model. Change any assumption and the report's figures change with it. Each is a team assumption [A#]; the validation plan is in Appendix C.

Assumption	Value (base case)
Contracts in force by slab, years 1 to 5 [A1]	S1: 0, 4, 12, 30, 60; S2: 0, 2, 8, 20, 40; S3: 0, 1, 4, 10, 18; S4: 0, 0, 1, 3, 6; S5: 0, 0, 0.5, 1, 2
Slab prices (₹ lakh a year) [A2]	S1: 1; S2: 4; S3: 15; S4: 45; S5: 400
Department Hubs in force, years 1 to 5; price [A3]	0, 0, 4, 15, 40; ₹8 lakh each
Reports per resident per year, years 1 to 5 [A4]	0.008, 0.008, 0.01, 0.013, 0.015
Value per report [A5]	₹175 (citizen time 100, official time 75)
Cost per report [A6]	₹4 (empanelled cloud, photo checks, messaging, redundancy)
Team cost, years 1 to 5 (₹ crore) [A7]	0.48, 1.8, 3.8, 6.5, 10.5
Government payment cycle [A8]	120 days
Implementation fee; customer success cost [A9]	25 percent of new annual contract value; 20 percent of subscription and implementation revenue
Insights, assisted filing, CSR (₹ crore) [A10]	Insights 0, 0, 0.2, 0.8, 2; assisted filing 0, 0, 0.1, 0.4, 1; CSR 0.8, 1, 1.5, 1.5, 1.5
Sales, field, outreach (₹ crore); legal, audit, other (₹ crore) [A7]	0.15, 0.4, 0.8, 1.3, 1.9; 0.1, 0.25, 0.4, 0.6, 0.9
Average population per slab (lakh)	S1: 0.5; S2: 3; S3: 12; S4: 50; S5: 600

Appendix B: Scenario detail

Conservative case (₹ crore)

	Year 1	Year 2	Year 3	Year 4	Year 5
Revenue	0.8	1.3	3.7	6.9	13.0
Costs	0.7	2.5	3.7	6.5	10.9
Operating surplus	**0.1**	**(1.2)**	**(0.1)**	**0.3**	**2.1**
Cumulative cash after payment delays	0.1	(1.3)	(1.9)	(2.5)	(2.2)
Residents covered (crore)	0.1	0.2	2.1	4.7	9.3
Reports (lakh)	0.1	0.2	2.1	6.1	14.0
Measured value	0.1	0.3	3.7	10.7	24.5

Ambitious case (₹ crore)

	Year 1	Year 2	Year 3	Year 4	Year 5
Revenue	0.8	1.3	8.9	18.4	36.3
Costs	0.7	2.5	6.7	12.3	21.3
Operating surplus	**0.1**	**(1.2)**	**2.2**	**6.1**	**15.0**
Cumulative cash after payment delays	0.1	(1.2)	(1.3)	1.8	11.1
Residents covered (crore)	0.1	0.2	6.4	14.2	28.0
Reports (lakh)	0.1	0.2	6.4	18.4	42.0
Measured value	0.1	0.3	11.2	32.2	73.5

Appendix C: Evidence register

Every tag in the report maps to a row below. Public sources (S) can be checked at the link given; product evidence (P) can be re-run from the repository or the live system; assumptions (A) are ours, with the way we will test them.

ID	Claim	Type	Source, test or validation plan
S1	India's population is about 1.45 billion (2024).	Public source	UN World Population Prospects 2024, via press: https://www.dtnext.in/news/world/indias-population-to-peak-in-early-2060s-to-17-billion-before-declining-un-794557
S2	Karnataka's projected population is about 6.82 crore (1 July 2024).	Public source	National Commission on Population technical-group projection, via https://statisticstimes.com/demographics/india/karnataka-population.php. Verify with the latest official release.
S3	Karnataka has 31 districts.	Public source	https://en.wikipedia.org/wiki/List_of_districts_of_Karnataka. One source also lists 236 sub-districts; the app uses 227 taluks from KGIS data [P6].
S4	Karnataka has 224 assembly constituencies and 28 Lok Sabha constituencies.	Public source	https://en.wikipedia.org/wiki/List_of_constituencies_of_the_Karnataka_Legislative_Assembly (cites Election Commission of India reports). Verify at eci.gov.in.
S5	India has 2,68,603 gram panchayats and traditional local bodies (March 2025); an earlier reply gave 2,69,073 (December 2023).	Public source	Rajya Sabha replies: https://community.data.gov.in/?p=119279 and https://rsdebate.nic.in/bitstream/123456789/746172/1/PQ_262_06122023_U408_p327_p327.pdf
S6	India had about 4,657 urban local bodies (2017).	Public source (dated)	A 2017 count; the current Ministry of Housing and Urban Affairs figure should replace it before submission.
S7	The national grievance system (CPGRAMS) recorded 18,19,104 grievances in 2022; central ministries disposed about 11.3 lakh and states and UTs about 4.4 lakh; central average disposal time fell from 32 days (2021) to 27 days (2022).	Public source	CPGRAMS Annual Report 2022: https://www.indianbureaucracy.com/dr-jitendra-singh-releases-the-annual-report-of-cpgrams-for-the-year-2022/ and https://theprint.in/india/cpgrams-report-shows-steady-progress-in-resolving-citizen-complaints/2263447

ID	Claim	Type	Source, test or validation plan
S8	Central ministries' average grievance disposal time was 16 days (April 2025), 15 days (October 2025) and 13 days (August 2026).	Public source (press reports of DARPG monthly reports)	https://www.constructionworld.in/amp/resources-company-news/over-125-000-grievances-resolved-by-ministries-in-april/73797 ; https://www.constructionworld.in/amp/policy-updates-and-economic-news/darpg-report-shows-faster-grievance-redress-in-october-2025/81414 ; https://newsonair.gov.in/central-ministries-redress-2-42-lakh-grievances-in-august-average-disposal-time-13-days/
S9	In the Central Secretariat, 37 lakh files (94 percent) were handled as e-files and 95 percent of receipts as e-receipts; 133 attached, subordinate and autonomous offices were identified for e-Office in 2024 and 55 had initiated implementation by late July 2024. S15	India had 1,092.79 million internet subscribers at the end of March 2026.	Public source	TRAI press release 32 of 2026: https://www.trai.gov.in/sites/default/files/2026-03/PR_No.32of2026.pdf
S16	The Digital Personal Data Protection Rules, 2025 were notified on 13 November 2025 with a phased rollout over 18 months.	Public source	https://www.tribuneindia.com/news/business/government-notifies-dpdp-rules-to-empower-citizens-protect-privacy ; https://www.storyboard18.com/digital/breaking-govt-notifies-final-dpdp-rules-sets-staggered-rollout-with-key-obligations-for-data-fiduciaries-84201.htm
S17	Karnataka's Janaspandana (iPGRS) offers a portal, app and the 1902 helpline, and escalates a grievance to a higher officer if the citizen is not satisfied.	Public source (secondary)	https://indiacustomercare.com/karnataka-integrated-public-grievance-redressal-system-ipgrs ; https://negd.gov.in/isl/Directory/statedata/418. Confirm on the official portal.
S18	Recognised startups can be relieved of prior-experience and prior-turnover conditions in public procurement (General Financial Rules 2017, Rule 173(i)).	Public source	https://www.startupindia.gov.in/content/sih/en/public_procurement.html. Relaxation depends on the tender; check the bid.

ID	Claim	Type	Source, test or validation plan
S21	India has 28 states and 8 Union Territories.	Public source	https://en.wikipedia.org/wiki/States_and_union_territories_of_India
P1	A working product is live on the web and as an Android build distributed to testers.	Product evidence	Web: https://code-for-community-e2cf2.web.app. Android: Firebase App Distribution. Code: branch feature/username-auth-free-maps-bbmp-wards (workflow commit 9cb3d32; later photo-privacy and navigation changes are deployed, commit pending).
P2	Speech recognition, language detection and translation verified live for all 10 app languages with Bhashini; fall-back providers built.	Product evidence	functions/src/scripts/verifyBhashini.ts, run live on 29 October 2026 (10 of 10 passed).
P3	Worker creation, assignment, status changes, citizen confirmation, reopening, the 48-hour rule, role limits and admin issue groups work end to end.	Product evidence	npm run verify:workflow: 32 of 32 checks; live end-to-end run against the deployed backend on 2 November 2026: 20 of 20 (test data removed). Code: functions/src/work/, functions/src/officials/adminIssues.ts.
P4	Photos are private by default; public only after versioned consent; face and plate blur and whole-photo blur; officials, assigned workers and admins can open the original; withdrawal deletes the public copy.	Product evidence	npm run verify:photo: 16 of 16 checks; live run with Cloud Vision enabled on 3 November 2026: 18 of 18 (test data removed). Code: functions/src/public/publishPhoto.ts, photoPrivacy.ts.
P5	64 automated app tests pass.	Product evidence	flutter test (including tests for the report flow, photo-visibility picker, fix-confirmation card and navigation).

ID	Claim	Type	Source, test or validation plan
P6	Built today: voice, text and photo reporting; suggested office from a verified directory of 26 offices; public report cards and a feed; leaderboard over a roster of 224 MLAs and 28 MPs; six-tab official dashboard; AI briefing and PDF report; area data for 227 taluks.	Product evidence	Repository: lib/, functions/src/ (agents/departmentSeed.ts, data/ka_mla_roster.json as of 25 October 2026, assets/geo/karnataka_taluks.json).
A1	Number of paid contracts by population slab and year.	Team assumption	Validate with the pilot partner's referrals, letters of intent from 3 to 5 offices, and sales-cycle data.
A2	Slab prices (₹1 lakh to ₹4 crore a year).	Team assumption	Price-test with 3 to 5 buyers; compare with comparable government software contracts; confirm GeM catalogue terms.
A3	Department Hub price (₹8 lakh a year), the number of hubs (4, 15, 40), 30 departments per state and 50 central departments.	Team assumption	Check the state secretariat's department list and the central ministry list; pilot the hub with two departments; interview department heads.
A4	Reports per resident a year (0.8 to 1.5 percent).	Team assumption	Measure adoption in the pilot. Context: the national system recorded 18.19 lakh grievances in 2022 [S7], a different and narrower scope, so it is not a comparator.
A5	Value per report of ₹175 (₹100 citizen time, ₹75 official time).	Team assumption	Time-and-motion study of citizen and official time in the pilot, priced at official wage data.
A6	Cost per report of about ₹4.	Team assumption	Compare with actual cloud, photo-check and messaging bills in the pilot; check the cloud price list.
A7	Team size and cost, sales and outreach, legal and audit costs.	Team assumption	Hiring plan reviewed quarterly against market salary data.
A8	A 120-day government payment cycle.	Team assumption	Ask pilot partners and GeM sellers for actual payment times.

ID	Claim	Type	Source, test or validation plan
A9	Implementation fee of 25 percent; customer-success cost of 20 percent; cost to win a contract.	Team assumption	Track actual onboarding effort in the pilot.
A10	Insights, assisted filing and CSR revenue.	Team assumption	Letters of intent from CSR funders; pilot assisted-filing stalls.
A11	Pilot scorecard targets.	Team assumption	Agree targets with the pilot partner in the first 30 days.
A12	Count and price used to size the Karnataka and national department-hub pool.	Team assumption	Replace with the official department lists.
A13	State sequencing for expansion.	Team judgement	Review with Bhashini language coverage and state government interest.
A14	The description of the paper-and-phone process and the actors' needs.	Team description	Process mapping and interviews with each role in the pilot partner's area.
A15	Competitor comparison by category.	Team assessment	Structured review of named products in the pilot's first 60 days.
A16	Risk likelihood and impact ratings.	Team assessment	Reviewed quarterly with the advisory board.

Appendix D: Glossary

Term	Meaning
Bhashini	The Government of India's language platform for speech recognition, translation and language detection.
CPGRAMS	The Centralised Public Grievance Redress and Monitoring System, the national grievance portal.
CSC	Common Service Centre: a local access point for digital government services.
Department Hub	A planned licence for state and central departments to transfer and jointly resolve problems on one shared ticket.
DPDP Act	The Digital Personal Data Protection Act, 2023, and its Rules, 2025.
e-Office	The government's electronic file and receipt system that replaces paper files.
GeM	Government e-Marketplace, the public procurement portal.
DPI	Digital public infrastructure: shared rails such as UPI, Aadhaar and DigiLocker.

Term	Meaning
Population slab	A band of population (for example 5 to 25 lakh) that sets a jurisdiction's annual price.
Voice Mitra	A trained local helper who assists citizens to file a report by voice.
Token ID	The receipt code each report receives; it carries no personal information.
